

Detailed **Quality Control and Assurance Technician** with depth of knowledge in all aspects of the production environment. Demonstrated strong problem-solving skills, capable of stepping into any role to ensure results are achieved. Recognized ability to manage competing priorities with a positive attitude.

## Core Proficiencies

Quality Monitoring • Visual Inspection • Task Management • Process Improvement • Technical Documentation  
• Strong Attention to Detail • Creative Problem Solving • Highly organized

## Technical Skills

Analytical Lab Equipment • Electronic and Engineering Diagrams • Microsoft Suite • SAP

## Work Experience

### **OSYPKA MedTec Inc**

June 2023- Present

At OSYPKA Medtec, (OMI), where innovation meets excellence in the medical device industry.

#### **Quality Inspector**

- Conduct visual and functional inspections of components and medical devices at various stages of the manufacturing process.
- Perform detailed measurements and testing on components and finished products using precision measuring equipment (calipers, micrometers, gage blocks/pins, measuring microscopes, height gages).
- Follow established inspection procedures to ensure compliance with regulatory requirements and company specifications.
- Identify and document defects or non-conformities and collaborate with production teams to address and resolve issues.
- Perform final inspections and quality checks before product shipment.
- Maintain accurate and detailed records of inspections and testing results.
- Assist in root cause analysis and participate in corrective and preventive actions when necessary.
- Collaborate with cross-functional teams, including manufacturing, engineering, and quality assurance, to improve product quality and processes.
- Assist with training personnel on quality procedures and processes.

## **Chaé Manufacturing**

July 2022 - June 2023

Chaé Manufacturing offers contract manufacturing of ToxicFree personal care and nutritional products.

### Quality Assurance

- Collaborate with multiple departments, ensuring procedures result in quality products.
- Adapt standard processes across over 250 distinct products
- Identify opportunities to minimize unexpected technical issues
- Develop procedures to improve efficiency while maintaining quality goals
- Responsible for daily system updates

### Quality Control

- Ensure that standards and GMP regulations are observed
- Perform inspections and quality testing to verify product specifications while ensuring that production is not hindered by quality activities
- Accurately maintain analysis records and inspection reports
- First Point of Contact for quality issues, including follow-up between quality and operations
- Superior rapport-building, employee relations, and conflict resolution skills; an expert at building and maintaining strong, highly effective business relationships

### Key Accomplishments

- Oversaw the successful completion of over 250 distinct product runs resulting in 100% customer satisfaction rating.
- Responsible for quality of over \$2M of products
- 657,000 units produced with less than 2% rework
- Improved existing process and authored 2 Standard Operating Procedures

## **OBC/Tine Trading Company**

May 2021 - December 2021

At OBC, quality isn't just a word to us, it is our way of life.

### Packing Department Lead

- Oversaw the full collection and packing process
- Ensured product and packaging specifications were consistently met
- Inspected finished products for quality

### Key Accomplishments

- Developed strong product knowledge
- Quickly promoted within the team to lead position

## **Celestica Portland**

May 2015 – May 2021

A leader in high-reliability design, manufacturing and supply chain solutions that brings global expertise at every stage of product development.

### Production Operator

- Electronic manufacturing skills including cabling and wiring
- Identified and participated in quality issue investigations
- Highly regulated clean room environment
- Able to read and apply specifications from schematics

### Department Lead

- Excel at multitasking and prioritization to ensure timely shipments
- Managed both situational and ongoing logistics for numerous projects with many moving parts
- Directed teams of technicians to maintain workflow

### Quality Support Team

- Effectively support manufacturing activities
- Documented quality incidents
- Investigating nonconformances for root causes
- Reviewed customer, supplier, and production documentation for accuracy and completeness

### Key Accomplishments

- Lead a team of up to 10 technicians
- 99% on-time shipment rate
