Employment History

CVG

Machine Operator/Assembler/Robot Weld

Vonore, Tennessee

March 2017 - September 2018

Neatly assemble approximately 10-15 auto body parts into a 2 sided welding robot within specs of sensors while the opposite side places welds. Remove finished product to inspect. Spot weld any mistakes the robot may make due to buildup slag metal. Maintain and clean the robot throughout the shift while keeping parts stocked for the following shift. 5S cleaning program and inventory of production at the end of the day. Excellent attendance record.

Ampacity Group

Apprentice Electrician

Lucerne, Colorado

September 2019 - Present

Any and all electrical applications residential, commercial and service. Bending and installing commercial conduit. Pull wire for separate/dedicated circuits. "Home runs" Connect varying gauges of wire to varying devices. 3 way lighting. I own all proper testing tools for line/load voltage. Build panels/subpanels in commercial applications. Installation of varying types of Romex wire. Installation of "range" devices. Using "cut in" or "old work" boxes for service upgrades. Tenant finishes. Interacting with customers personally by phone or face to face on the job. I also have all my own hand tools (linemans, dikes, strippers etc.) and power tools (Dewalt Impactor and Hammer drill 20V MAX Lithium Ion)

Hitch's Auto Repair & Machine Shop

Lube Technician

Maryville, Tennessee

November 2015 - July 2016

Main job was running two separate auto part washing machines. One for cast iron parts the other for aluminum. Also worked the front desk from time to time. It was my job to log each individual vehicles specs prior to any type of maintenance and witness the mechanics signature. On occasion I would fill in for the senior mechanics on a smaller job.

Phillips Electric

Electrician Apprentice

Durango, Colorado

August 2016 - January 2017

Any and all electrical applications residential, commercial and service. Bending and installing commercial conduit. Pull wire for separate/dedicated circuits. "Home runs" Connect varying gauges of wire to varying devices. 3 way lighting. I own all proper testing tools for line/load voltage. Build panels/subpanels in commercial applications.
