As a mechanical assembler, I am driven by a passion for learning and a commitment to quality. With a keen eye for detail and a desire to continually improve my skills, I am dedicated to producing high-quality products that meet or exceed customer expectations.

Work Experience

Team Lead

Woodward, Inc. - Fort Collins, CO

January 2019 to Present

I am a Team Lead at Woodward, where I work on the 2nd shift in the cleanroom. My main responsibility is to oversee a team of workers who manufacture various parts made of aluminum, steel (including stainless steel), and cast iron, following ISO standards to ensure quality control.

These parts come from all across the shop and require careful handling and attention to detail. As a part of my job, I manage over 250 pieces of inventory and work closely with other departments to ensure that production goals are met.

As a Team Lead, I am responsible for ensuring that the manufacturing process runs smoothly, that my team is properly trained and equipped, and that all quality and safety standards are met. In addition, I am often called upon to troubleshoot issues and collaborate with other departments to ensure that production goals are met.

Overall, my role at Woodward is critical to the success of the manufacturing operation, as I help to ensure that high-quality, precision parts are produced on time and to specification while following ISO standards and managing inventory.
