Progress Notes**Subjective:**

Follow up today from Open reduction and internal fixation of left parasymphyseal mandibular fracture and placement of maxillomandibular fixation. Left maxillary alveolar bone fracture and closed reduction of left maxillary alveolar bone fracture. Denies fever, nausea, vomiting, leg pain or swelling, pain is moderate. The pt states that they have been using Peridex oral care as directed.

Objective:

BP 104/76 mmHg | Temp(Src) 97.4 °F (36.3 °C) (Tympanic)

Wound: MMF arch bars and screws intact, no signs of infection. Wires intact.
Neuro: Cranial Nerves II-XII grossly intact, V1-V3 distribution intact bilaterally

Assessment:**Patient Active Problem List****Diagnosis**

- Facial laceration
- Closed head injury
- Open fracture of ramus of mandible (HCC)
- Open fracture of maxilla (HCC)

Plan:

Wires removed from maxillomandibular fixation.

Elastics placed. Additional elastic bands given to patient educated how to place them on if previous elastics fall off. Patient voices understanding

Educated the patient we'll plan for removal of his maxillomandibular fixation arch bars in 2 weeks.

Patient voices understanding

Patient can return to work without restrictions.

The risks, benefits and options were discussed with the pt. The risks included but not limited to pain, bleeding, infection, heavy scarring, damage to surrounding structures, fluid collections, asymmetry, and need for further procedures. All of His questions were answered to her satisfaction and He agrees to proceed with the operation.

F/U day of surgery
