Objective : To achieve good relations within the company, being accepted as a hard worker, a team player and overall well rounded person accepting responsibility at any given time to help the company move forward and make a profit from every job.

Skills/abilities: I have gained my skills through the boilermaker union and the pipefitters union , of these I've learned to read and understand blueprints from all trades , can use all power tools used in the trade in both plumbing and hydronic piping such as pipe expanders, propress tools , cpvc piping manifolds , knowledge of screwed pipe on gas applications for hydronic and plumbing , I have the ability to solder pipe, and hard solder as in brazing with 95/5 silfloss, do have experience in the welding field and can weld piping in 6g, 2g, 3g variations with stick, mig and tig applications, using a variety of machines as well as means such as bare wire and gas , flux core and innersheild wire with or without gas , stick welding using 7018 low hydrogen rod , 5p and 5pplus 304 stainless steel rod and 305L for mixed stainless steel and iron. Have experience and knowledge in tube bending for gas , air and other gases used in the chemical and clean room industry. Have extensive knowledge of all piping systems in hydronics , chilled water, steam, as well as chemical and fuel oil, and domestic.

Do have the ability to work on boilers, have experience working on fire tube and water tube boilers that generate steam for energy systems in industrial applications, have experience on igniters and there components, replacing fan motors, solenoid valves and switches that operate actuators and make up water valves as well as gas components.

Have gained some experience in the plumbing field have run some underground sanitary, grease and vent lines as well as setting grease interceptors as well as piping systems in domestic water and sanitary and vent lines using cast, plastic, and copper as well as pex piping in apartment applications and some hotels,

Also have experience setting air handling units and installing piping according to their specific applications and as drawn out on the blueprints.

Have been in the service field installing and repair and replacement of equipment in hydronic systems, chilled water systems, steam systems and gas piping also have experience in the domestic water both in residential work and commercial work installing domestic water systems for restaurants, apt buildings , and single family units replacing and repair of sanitary systems vent and grease lines as well as running cast , copper and plastic for the plumbing industry , have the ability to work well with the customer and together can find a suitable arrangement to do the work they need in a suitable time that will bring in a profit for both the company and the customer.

Have experience in low voltage electronics for hydronic, ac systems and boilers running lines and piping for low voltage application's. and all components related to their relative application on any system.

Have experience in the safe operation of scissor lifts, man baskets, Boom lifts , fork lifts

Experience Most of my experience had been gained throughout my years with 2 local unions 10 years with local 101 boilermaker union learning basic welding procedures on many types of metals as well as their correct welding application ie Mig, tig, stick welding . also was trained to install and weld on vessels and high pressure vessels for the boiler and steam industry My experience as a boilermaker was mostly through one company Silver engineering Works of Denver which later relocated to aurora Colorado and later in the years past went out of business.

22 years of that experience was out of local 208 pipefitters local out of Denver Colorado, I had been classified as either a fitter or welder and still do both with great professionalism and pride in our industry today This is where I was taught of hydronic systems chilled water systems fuel oil and gas as well as their perspective piping and components , I've had experience in both the service field and new construction,. Of these years I worked out of the local I worked with several contractors each for several years of these were Trautmen and shreve mechanical contractors , Murphy compamy, Crabb plumbing and heating , US engineering, and Harper mechanical. I also spent four years working at Rocky flats in there last years of operation.

I decided that in the year 2011 I would retire and go onto open a Auto Tech shop as I had experience in fixing autos and trucks alike and enjoyed my time doing so, I opened a shop up until the late year of 2013, I was forced to look another route and came back into the industry in that same year working as a boiler operator and maintenance person for JBS Swift of which I worked for 3 ½ years respectively on grave yard shift. Which of course did not agree with my everyday life .

It was then I came back into the industry as a plumber for various companies working for a temp employer of which is called Tradesmen international out of ft Collins Colorado . Of these companys were RK mechanical of which I spent 9 months working downtown Denver another was linds plumbing and heating and Neu works mechanical both of ft. Collins in northern Colorado . as well as a few other contractors from the area.

License and certificates : I have pasted the 10 hour osha safety class and carry ID , Have no plumber license but do believe I have accumulated enough hours to attain my commercial license

for Colorado . have had a steam fitters license for the city and county of Denver for over twenty years and have since let it lapse .
