Highly skilled Production Supervisor | Welder

Supervision of up to 14 individuals. I was responsible for hiring and termination as well as reviews and pay increases. Delegating responsibility to others was especially rewarding, as seeing others grow has always been a passion of mine.

Ex: After training an individual I then turned that function over to that individual. This gave them ownership.

I built wonderful relationships with people. I still keep in touch with today. I was a working supervisor. I welded and managed for seven years. Motivating people is a strong suit and I find just making oneself available is a great start.

Ex: After assigning a particular job to an individual I would then check in on them to make sure they had been properly prepared for the job.

Developed job descriptions to give employees direction, Remained very consistent with the day to day administration, company policies and work assignments. Effective communication is key in this role and one should never use authority as a means to achieve results. Ex: By asking an employee to do something rather than telling the employee would get much better results.

I enjoyed supervision more than any other job I've ever had.

Experience

March 2012 - May 2016

Atlas Mfg- Welder

Minneapolis, Mn

- Sheet metal welder thickness from .020 to .125
- taught other welders to weld using Mig and Tig processes
- used calipers, tape measures, go no go gauges
- operated drill press, shear, punches, press brake, P2, hardware machines, grinders
- worked in every Department including front office, assembly, paint shop and shipping

February 2007-March 2012

Arrow Tank & Engineering – Welder

Cambridge, Mn

- Welded structural steel as well as sheet metal. Fit up and welded large vessels for the oil industry. Welds were held to strict standards and x rays and magnetic resonance were used to determine weld quality. Held every certification available to attain.
- Used mig and tig processes
- used carbon arc as a cutting method along with an acetylene torch.
- Fit up and welded large vessels for the oil industry
