Address:

11591 Berry Road

Darlington, WI 53530

cel. 608-726-2433

fasteddyirons@yahoo.com

- SUMMARY:**
- I started my career as a machinist in Texas in 1992. It began with a 2 year apprenticeship.
 - I have extensive experience in all types of metals from Aluminum and mild steel to Titanium and Hastaloy.
 - In my over 20 years in manufacturing I have worked for customers in fields ranging from oil production and metal stamping to aerospace and biomedical research.

- EDUCATION:** **Graduated from McCullough High School in The Woodlands Texas**
- The majority of my education was learned through my apprenticeship that I began at age 18. With the help of my Mentor, O.D. Chance Jr., as well as several "old timer" machinists who took me under their wing, they taught me the way things were done before there were computers.
- I also attended Haas CNC Lathe programming school in Milwaukee, WI in 2006

- EXPERIENCE:** **Morgan Performance Spring, Texas 1992-1996**
- Started as a helper in 1992 and when I left in 1996 I was a fully certified machinist trained on engine lathes, bridgeport mills, surface grinders and hydraulic shaper machines.
- Venture Metals Houston, Texas 1996-1997**
- This was a shop specializing in exotic metals. I got my first hands on experience with Horizontal Boring Mills and Vertical turret lathes, and the complexities in difficult to machine metals.
- SCS Machine and Fabrication Houston, Texas 1997-2002**
- I worked the night shift and although there was never technically the supervisor, over time I became the go to guy with any questions or problem. I learned here that I had something valuable to offer given the right people and equipment.

(experience continued)

Jenkins Research and Manufacturing Fitchburg, Wisconsin 2003-2010

- I started out as a general production machinist but soon moved my way up to the Manual position. Shortly after this I went to Haas CNC Lathe school and was also put in charge of the Lathe Department as well as building and maintaining all in house fixturing

Die Makers Manufacturing Hazel Green, Wisconsin 2010-present

- Started out as an all purpose manual machinist on bridgeport mills and manual lathes.
Shortly took over the majority of all in house surface grinding of post-hardened tool steel.
Extremely close tolerance work, and small run parts are my focus.

Relocating: My family and I are planning a move across country to be closer to my wife's family. And the small town setting that we currently reside in has very limited resources for the special needs required of my 2 oldest children.

I would love the opportunity to become part of your team and bring my extensive experience to work for you.
