WORKING EXPERIENCE

General Electric   December 2018-July 2019

- Responsible for complete understanding of sourcing tool from start to finish for competitive bids. Daily tasks included using this tool to invite non-preferred to suppliers to invite in spots to bid on a sourcing bid for the right to do contract work for General Electric.
- Analysis of spreadsheets including hundreds of thousands of lines of data spanning hundreds of suppliers, and manipulating this data to make sense of it in Power Point Presentations using graphs & summaries.
- Presentation of my findings made in QBR's to top suppliers within the Healthcare Division of General Electric. The data I manipulated and presented was used as leverage in negotiations with top suppliers for General Electric Healthcare.
- Provided service to GE employees worldwide in regards to questions they had on the sourcing tool, with topics ranging from a large number of categories from engaging suppliers to bid, to more technical issues such as changing the bid currency within the tool.

Danone: World Food Company   August 2018-December 2018

- Tracking, scheduling, and analysis of truck shipments including which orders are assigned to specific trucks.
- Doing analysis on which truck lanes are consistently having issues, investigating the reasons these trucks are late, and coordinating with carriers as to how to resolve these issues.
- Pulling orders placed to Danone using SAP for specific customer such as Kroger, Costco and Safeway, then using each company's specific appointment scheduling website to make truck appointments, track them, and communicate with carriers shipping them.
- Creating mass pulls of truck shipments going to various locations, containing large numbers of orders. Each pallet contains three orders maximum, which would then need to be looked up in Walmart's Scheduling Appointment to see which group of orders are to ship together, as well as identify if there are any errors in the orders placed by our customers.

Advanced Energy, Supply Chain Intern   April 2017- January 2018

- Generated reports for orders, using data entry and manipulation skills in various computer programs to manage and track a variety of information such as inventory in different locations.
- Acquired greater knowledge of Microsoft Excel, Outlook and Word through every day use of these programs.
- Developed new skills in the use of SAP (a common MRP system) in order to manage a variety of information needed on a daily basis for the company.
- Gained experience in using the following SAP codes on a weekly basis: CS15, MD04, MMBE, MB51, ME23, ZA12, and ZLED.

- Using Microsoft PowerPoint to display my findings in SAP; as well as presenting my findings to a group of full time colleagues in the Supply Chain Management field at Advanced Energy.
