Work Experience

Machine Operator press break /Lead

American Copper & Brass, LLC-Aurora, CO

December 2020 to January 2025

As a machine operator, I would run a plate saw so I would have the material handler stage the material on top of the saw I would read and calculate my dimensions and piece count specified by the work order then I would proceed to trim cut my material then make my cuts to the dimensions that are required

- Also fill out the sampling plan that is also required on the work order measure everything with the caliber and tape measure to ensure everything is in tolerance once everything is done I would place the pieces on a pallet along with the work order and would be moved to the next staging area.
- As a foreman and the lead on the floor, I would start my day by opening up the shop, turning all the machines on making sure the operators fill out their daily checks for their equipment. And checking off all forklifts and cranes.
- My next task would be to sign into SAP printing out work orders, and assigning the right piece of material for the job needed to minimize scrap and waste and then staging the production work orders for the material handler for the daily production schedule.
- Lastly, I would go to the next stage area to where the finished product is staged. I would do a double count remeasure sign off then I would confirm the order, print labels and shipping tags then package band up pallet then moved to the shipping and receiving area by forklift and if there's any remnant tag left over for the material from previous jobs, I would place those tags on material, then scan them back into a location using RF scan gun.
- Extra skills crane & forklift certified.
- Amada saw knowledgeable
- Counting and keeping track of inventory
- Word, document, and Excel experience.
- Troubleshooting problem-solving skills
- Completely references will be provided upon request.

Machine Operator and Platting Operator

TTM Technologies-Ken-Caryl, CO

August 2018 to November 2020

Gold plating circuit boards xrf readings reading blueprints using depth gauges soldering and final finish processor

General Warehouse duty's

Forklift operator

Material handling

Assembly/Machine Operator

Precision Metal Manufacturing

October 2015 to August 2018

- Fabricate various machine parts.
- Using dial indicators and depth gauges.
- Read machining blueprints
- Grind and Deburr parts as necessary.
- Run Drill Press, Hardware Machines, Brake Press, NC's, and a Shear.
- Hand tool usage

Forklift Warehouse duty's material handling

Production Worker

Colorado Roofing Manufacturing Co

June 2015 to October 2015
