WORK EXPERIENCE

Lead Person

Honeywell - Arvada, CO - 1997 to Present

- Served as the lead, successfully managing 11 employees to meet the daily production schedule.
- Trained lab technician in use of the Leco oxygen/nitrogen analyzer, Shimadzu particle size analyzer, Sonic Sifter Separator and the Fisher particle size analyzer.
- Oversaw both visual and analytical quality control, monitoring the flow of high purity tungsten metal through the refining, reduction and screening processes.
- Worked safely with argon, ammonia and hydrogen gasses.
- Helped streamline workforce efficiency by implementing 5S strategies and reorganized the structure of jobs within the plant to require less employees.
- Played a key role in staffing and performance management and leading in terms of process improvement, lean manufacturing and problem resolution.
- Assumed the role of Supervisor in their absence and played a key role in performance management, involved in employee reviews and terminations.
- Achieved close to 4,000 days of no work time loss incidents at time of plant closing.
- Excelled in the position based on dedication, loyalty to the company and the natural ability to lead and supervise.

Lead Person

Bell Helmets - Rantoul, IL - 1987 to 1997

- Served as the lead for 30+ employees, ensuring daily production quotas were met during manufacturing of innovative, technically superior auto racing helmets that maximized protection and enhanced driver performance.
- Responsible for quality control including visual inspections and certification through the complete production process related to auto racing helmets.
- Assumed the role of Supervisor in their absence and played a key role in performance management, involved in employee reviews and terminations.
- Streamlined the helmet routing process working in collaboration with the engineering team to implement a CNC machine.
