## PROFILE

I have experience in all around construction for 20 years which includes structural and pipe welding. I have the ability to read blue prints and coordinate jobs. I have always been a punctual loyal person and work extremely well with others. I understand that everyone has a different point of view and there is more than just one way to get a job done. In my early years I spent a lot of time doing cement and foundation work then moved on to landscaping and painting houses and businesses. I am a jack of all trades but my passion is metal and anything involved with it.
