Work Experience

CNC Setup Technician

ARC Group Worldwide - Loveland, CO

December 2019 to Present

I am currently in position for CNC Machine technical setup and CNC Operator.

Experience measuring parts using different equipment such as drop gages, smart scopes, scales, as well as calibrating said equipment.

As a Tech Set up my responsibilities include switching out tools and setting up programs based on the next appropriate work order instructions and assure all cycles are running and parts are measuring accurately according to WI.

As a CNC Operator my responsibilities include attending to the CNC machine during each cycle to catch any malfunctions during that cycle to prevent as much rejected parts as possible. I am to visually inspect parts for cracks or any material defects prior to loading into the pallets, run the cycle, unload parts from pallets and follow work instructions for the job that is being worked, check that all parts have passed the required gauging, remove any and all burrs with a file.
