 - 4 years of mechanic
 - heavy machinery
 - hydraulic
 - diesel
 - performance/electrical
 - 2 years of scaffolding, painting, and insulation installment
 - Very good with tools and equipment
 - Good with computers and data preservation
-

Experience

Petrochem 2020-2021

At Petrochem we would work on various things, from installing insulation on new buildings, painting various locations, asbestos control in worn down areas and mainly scaffolding. During my time with Petrochem we got to work with big companies and names in Colorado including Coors.

Fleet Mechanic Hudspeth 2021-2024

After Petrochem was bought out by Hudspeth I moved from warehouse tech to working as a fleet mechanic for Hudspeth. I was always on call and always on my feet. We would work on anything from diesels, hydraulic systems, gas trucks, and cars, commercial vehicles to heavy machinery like backhoe loaders, excavators, etc. We would start with our basic diagnostic, sometimes working in teams most of the time alone depending on the problem and what vehicle.

Molson Coors 2024-Now

Working for Molson Coors as a EST Mechanic I've worked a lot with things like conveyors, gears, pneumatic engines, hydraulic engines, etc. I've also been able to touch more of the Electric side having to do reboots, rewiring, and computer start ups.

Education

Strive Prep RISE/ Graduated

2017- 2021, Green Valley Ranch, CO

I did attend a different school for my first two years of High School taking AP classes like Spanish, human geo, and math then transferred to this school for my last 2 years. I took college level classes including classes of engineering, and mechanics. Ended up graduating with more credits than enough.

Performance Mechanic/ 7 years

I grew up my whole life working on cars. I admit it's mostly a hobby of mine but through our small family business we've built amazing cars for racing use purposes. Engine rebuilds, engine swaps, body work, boring engine blocks and heads, custom exhaust piping and turbo piping, reprogramming. Etc.
