## Work Experience

---

### **Coating Technician/ Powder Coating Technician**

GPT Industries - Wheat Ridge, CO

October 2018 to February 2020

At GPT I was responsible for applying a high temperature coating to various gaskets that were used in the oil and gas industry. I cleaned parts with alcohol then used a hot flocking technique to apply a liquid coating to the gaskets. Last using the same hot flocking technique I would powder coat the inner ring of the gaskets. I was the lead of the Powder Coating Department which they referred to as the coating cell.

### **Powder Coating Technician**

Majestic Metals - Denver, CO

December 2016 to May 2018

My day to day operations include obtaining job tickets reading blueprints and making sure every part was powder coated according to specific instructions. I worked in a one-man booth with one prepper and an oven man this was so I could focus on my main job which was painting. Occasionally I masked and prepped on jobs that required a lot of masking and prepping. I also clocked in and out of every job to ensure I was making quote times.

### **Lead Powder Coating Technician**

Goldberg Brothers - Denver, CO

January 2014 to November 2016

I was responsible for obtaining the job detail for the day and I ensured every item on the paint list was properly washed sanded cleaned and Powder coated. I powder coated parts and made sure they were cured properly. I made sure the ovens were at correct temperature. I maintained wash line refilling Phosphate and GF cleaner as well as cleaning out tanks and ovens. I sanded, deburred and tumbled out any imperfections in the metal I operated the spot welder and I made sure the paint dept. stood clean.

### **Powder Coating Technician**

Industrialex

July 2012 to December 2013

I worked in a two-man booth where we worked together to ensure all parts were powder coated correctly. I made sure the line kept moving and ovens were at correct temperature. When I was waiting for parts I helped prep and clean.

### **Powder Coating Technician**

Wanco Inc - Denver, CO

June 2011 to August 2012

I was responsible for prepping metal parts before they were powder coated. I power washed parts individually then sanded out blemishes. I placed parts in the oven then sent them to the powder coaters. When working on the assembly line I had to hang and plug pieces so they could be cleaned and painted. When pieces were complete I checked for any imperfection before sending them off to be assembled. I eventually became a Powder Coater Where I worked both in batch and on the automated line.

## Education

---

### **None in Business Management**

Community College of Denver - Denver, CO

2009

### **High School Diploma**

Ridge View Academy

2007

## Skills

---
