My professional goal is to obtain a position in the field of metal working and manufacturing. I have experience relevant to conventional machining, and have invested considerable time and effort towards learning to operate CNC milling machines.

I own my own measuring tools and basic machine shop tools. I have experience working with steel as well as wood, copper, bronze, aluminum, stainless steel and plastic. I have an aptitude for quickly learning any skills or attributes needed to complete my job safely and efficiently. I am also proficient at troubleshooting and pro-active communications when problems arise in order to enhance production methods and practices and ensure the duties of my position are always fulfilled.

I look forward to the opportunity to speak with you about potential employment opportunities; please do not hesitate to contact me with any questions.

Thank you for your time and consideration,

-Micheal Macfarland.
