## **Amada Brake Press Operator and Set-up**

Denver, CO 80238

[weresnephew@hotmail.com](mailto:weresnephew@hotmail.com)

720 909 2821

To build upon skills to a cutting edge level and find a career opportunity that will allow my knowledge to expand infinitely.

Authorized to work in the US for any employer

## Work Experience

---

### **Press brake operator**

C&D Metals

March 2019 to November 2019

Responsible for set up of multiple press brakes and quality of parts by other operators/setup men.

### **Press Brake Operator**

KIOSK Information Systems - Louisville, CO

October 2018 to January 2019

To set up and run multiple Amada press brakes and to work as a team with my coworkers to fulfill orders promptly and to customer satisfaction.

### **Amada Brake Press Operator and Set-up**

Majestic Metals - Denver, CO

September 2016 to August 2018

Started as a RG-50 press brake operator and over time grew to run all press brakes in shop and learned set-up as well. My specialty was their most technologically advanced press brake, the HG1003 ATC. Eventually the shop bought more of these machines and I was left as a "lead" to teach and educate new operators on my own. As well as ensure the efficiency and precision of these machines and those under me.

### **Hook Machine Operator**

Eagle Claw Fishing Tackle Co - Denver, CO

February 2015 to July 2015

Operated, adjusted, and maintained not only my four designated machines but others machines as well, while they ran set ups. All done in a fast paced, high-stress environment. Heavy use of blueprints, and a variety of measurement tools. Varying from calipers and micrometers to two different comparators. Team work wasn't obvious but was very much a necessity in order to continually keep the machines running at company desired, optimal level.

July 2015- September 2016

I was employed through multiple construction companies as I was diversifying my skills and going with what has been in season. From roofing, landscaping, snow-removal(skid steers, plows), and architectural construction currently.

Eaton's Cooper Lighting - Aurora, CO  
August 2013 to November 2014

Operated many various machines and equipment such as; Press Brakes (Armada & RAS), dies & punches, saws, drill presses, manual mills, hydraulic presses, MIG steel and aluminum, various de-burr and DA tools. Perfected on reading blueprints and being able to differentiate materials by memory.

Positions Held:Continued

Otter Box  
August 2012 to December 2012

April 2013 - July 2013: Configuration

Company: Otter Box

Fredrick, Colorado

Assembling and packaging product while looking for defects or flaws with accuracy in a very fast paced environment.

### **operator**

CNC Lathe & Mill - Golden, CO  
January 2012 to May 2012

Interpreted prints, drawings and sketches, checked parts regularly for accuracy. Used micrometers and other hand held or machine tools to determine measurements. Maintained, managed and operated (sometimes multiple) machines to safety and cleanliness specifications.
