Experience

I always pride myself on the work I do. I was raised to give it 110% and do it right. Growing up I delivered papers for the Fort Lupton Press. I have spent a year working for a computer business, building computers, and helping customers with their questions.

I am self-taught in Web Development and am working on a website I continue to work hard towards my goal on getting it somewhere.

I have worked on my Grandma's farm for most of my life and have experience on heavy equipment like a skid steer.

I worked for Target for a few months in Electronics and have experience with working with team members.

I have worked with computers since I was 4 years old. I have a good understanding how networking works.

I am currently employed at Sierra Dust Control. My job entails setting up movers with hoses and making sure there is no dust. I work with many oil companies including Halliburton.

Skills

Website programming. I know PHP, it's my main language as of now. Planning on learning other languages. But I also know CSS, HTML, Little Javascript.

My qualities include working with technology. I've done it my whole life.

I enjoy working on cars. I have rebuilt the engine on my truck twice. And currently fixing it up, while helping with other projects.

In a working environment, I am good at following orders, and getting the job done the way it needs to be. I like to do my job right and efficient.
