Work Experience

Drain Technician

Envirotech pros - Denver, CO

February 2022 to November 2022

Would run a sewer scope down the sewer lines from either basement or roof access. Look for damaged or clogged lines then locate and mark damaged point. I also would record and voice over the video in detail explaining what's going on in the sewer line. Over the time of this practice I've gained a better knowledge of commentating and detailing for customers so they understand their situation.

Handyman

Metro construction group - Denver, CO

June 2021 to January 2022

This job was all round of skills. We would help Zillow and Red Fin homes look brand new. This job included adding new light fixtures, changing out hot water boilers, caulking bathrooms, adding trim, and painting full rooms, anything to make the home run better. This job showed me the business aspect of fix and flipping a home.

Truck driver

Gold star excavation - Commerce City, CO

February 2021 to May 2021

My time at gold star excavation I was driving NON CDL dump trucks. I got really familiar with driving bigger sized trucks with also excavators being attached. I enjoy the skill it takes to be able to maneuver big rigged trucks!

Cannabis Cultivator

Affinity - Commerce City, CO

October 2020 to February 2021

At affinity my job there was a grow tech! I mostly did fanning once the plant got to a good pruning stage. After a month or so I was shown how the whole process of transplanting and the harvesting stage was done. I definitely accomplished the fast pace when it comes to fanning! Also, it's just a great environment to be around!

Plumber

Sewer Lines Only - Lakewood, CO

June 2018 to August 2020

My time at sewer lines only was nonstop learning and getting a better knowledge of plumbing. It started with just being a simple labor as a pipe layer for exterior lines. Would make the double sweep clean outs

and run the rest of the line to the city tap. Soon after I was moved to work interior jobs in the basement. This work consisted of proper care to the residents home making sure no debris of concrete would be going no further than our line of work. After everything was exposed we would just replace cast iron to ABS and lead it out to the exterior pipe. I like to say I know a good portion of the ins and outs of the labor portion of plumbing. This jobs also brought more skills to practice like landscaping, replace irrigation line, asphalt patching, and concrete finishes. So to me having this knowledge will take me a long way!

Manager

Zumiez - Gainesville, GA

October 2014 to August 2017

Working at zumiez as a 2nd assistant manager was a great learning experience! My position had many tasks to handle from making schedules, receive and sending out inventory, and also handling interviews. My favorite skill I accomplished was building a strength in my customer services.
