I am looking for a company that has long term positions with room to grow. I have a lot of experience in warehouse/ manufacturing work. I have gained experience in leadership as well.

EXPERIENCE

2020 – CURRENT

QUALITY CERTIFYING TEAM LEAD, PEPSICO

In this role I am the 9pm team lead that looks over 15-20 Loader/Order pullers. I activate routes according to the Manpower list that shows departure times. Once the routes were activated the loaders would build the pallets and take them over to load or stage the pallets depending if they got an audit on the pallet. The ones that got audits either from wrong counts or missing product I am then responsible for auditing the pallet to verify if everything the customer ordered was there. Once the route was finished I would then finalize the truck and make sure all the required paperwork was completed. I would then report back on the computer to relay any issue there may be with a rout. I operate a mid-Ryder pallet jacks, Sit-down and stand-up forklifts when the team needs it, whatever is needed to get the job done. If we get short handed I would also go and pick orders with team.

2016 – 2020

CNC MACHINIST, SUNDYNE

I operated CNC Laythes, CNC Mills, and CNC Hobs Precision parts with very tight tolerance's according to blueprints and sketches. I was also responsible for using a balancing machine to balance completed part assembly's once they were ready. I would help in receiving when needed in which I would operate forklifts (sit and stand) and over head cranes (jig and 10 ton)

2015 - 2016

Root Spar Manufacturer, VESTAS BLADES

I started the beginning process of making a windmill blade. I ran fiberglass machines that would wrap around a mandrill getting it ready for the giant oven. I would then use overhead cranes (10-20 ton) To crane the baked fiberglass root over to alignment, the drill shack, insert robots, and chamfer machine. I used forklifts, electric pallet jacks, and Tugger machines.

2012 – 2015

Inventory control/warehouse worker

I was in control of stocking the finished goods in the warehouse that were made in house on the other side. I would also help out receiving and in assembly running various machines when ever they needed.

EDUCATION

JUNE 2012

WESTMINSTER HIGH SCHOOL,

Graduated with diploma

SKILLS

- Forklift (sit-down and Stand)
- Verbal and written communication
- Order scanners, computer
- Sorting and handling materials
- Headset order picking
- Work orders
- Packaging
- Leadership
- Ability to lift
- Equipment operating
