Hi Lis,

Thanks for your follow-up on this matter. We greatly appreciate it!

Bellow is Gilbert's ( C Shift Supervisor) first report of the incident concerning Stormy.

Please let me know if you need anything else.

Thanks and very best regards,  
Rosario

Supervisor: Gilbert Perez on 01/17/2016 12:29 AM

The operator was in the process of setting a line up for production. The product was Conipur 275 which is packaged in pails. As part of the setup process pails are manually labeled prior to the product run. As the operator was positioning the pallet of empty pails with a manual pallet jack she tripped forward but caught herself from falling. In catching her forward motion she used her left arm to stop against the pallet of empty pails. The operator then felt some discomfort in her shoulder. It was described in the area of the left shoulder down to the elbow. The operator iced down the area of discomfort.

Hi there,

Here is the list of approved WC clinics. Stormy is on her way to the clinic right now and I will keep you posted on her status.

Could I please get the first report of injury from the supervisor?

Thank you!
