Permethrin 5% cream

What is this medicine?

PERMETHRIN skin cream is used to treat scabies.

What should my health care professional know before I take this medicine?

They need to know if you have any of these conditions:

- asthma
- an unusual or allergic reaction to permethrin, veterinary or household insecticides, other medicines, chrysanthemums, foods, dyes, or preservatives
- pregnant or trying to get pregnant
- breast-feeding

How should I take this medicine?

This medicine is for external use only. Do not take by mouth. A bath or shower is NOT recommended before applying this medicine. Thoroughly rub the cream into all skin surfaces, from your head to the soles of your feet. It is important to apply it everywhere on your body, not just where the rash is. Apply the cream between fingers and toe creases, in the folds of the wrist and waistline, in the cleft of the buttocks, on the genitals, and in the belly button. Use a toothpick to apply the cream beneath your fingernails and toenails. Nails should be cut short. If you have little or no hair, or you are applying the cream to an infant or young child, make sure you rub the cream into the neck, scalp, hairline, temples, and forehead. Leave it on for 8 to 14 hours, then remove it by bathing and shampooing. If you are applying this medicine to another person, wear plastic or disposable gloves to protect yourself from infestation. Do not get this medicine in your eyes. If you do, rinse out with plenty of cool tap water.
