Zovirax ophthalmic ointment

What Zovirax is and what it is used for?

Zovirax Ophthalmic Ointment contains a medicine called aciclovir. This belongs to a group of medicines called antivirals. It is used to treat eye infections caused by the Herpes simplex virus. It works by killing or stopping the growth of viruses on the front of your eyeball (cornea).

How to apply Zovirax to your eye?

1. Wash your hands.
2. Use your finger to gently pull down the lower eyelid of your infected eye.
3. Tilt your head slightly backwards and look up.
4. Apply 1cm (about 1/2 an inch) of Zovirax to the inside of your lower eyelid. Try to avoid the tip of the tube touching any part of your eye.
5. Close your eye for 30 seconds.
6. Wash your hands after applying Zovirax.

What you need to know before you use Zovirax?

Do not use Zovirax if:

- you are allergic (hypersensitive) to aciclovir or valaciclovir or any of the other ingredients. If you are not sure, talk to your doctor or pharmacist before using Zovirax.

Warnings and precautions

Talk to your doctor or pharmacist before using Zovirax if:

- you wear contact lenses. Stop wearing them while using Zovirax.
- If you are not sure, talk to your doctor or pharmacist before using Zovirax
