What is sofosbuvir and velpatasvir?

Sofosbuvir and velpatasvir are antiviral medications that prevent hepatitis C virus (HCV) from multiplying in your body.

Sofosbuvir and velpatasvir is a combination medicine used to treat chronic hepatitis C in adults with HCV genotype 1, 2, 3, 4, 5, or 6.

This medicine is given in combination with another antiviral medicine called ribavirin in people who also have advanced cirrhosis.

Sofosbuvir and velpatasvir may also be used for purposes not listed in this medication guide.

What is the most important information I should know about sofosbuvir and velpatasvir?

Sofosbuvir and velpatasvir is sometimes used in combination with ribavirin. Ribavirin can cause birth defects or death in an unborn baby. Do not use ribavirin if you are pregnant, or if you are a man and your sexual partner is pregnant. Use effective birth control to prevent pregnancy while using these medicines together and for at least 6 months after treatment ends.

Read the medication guide or patient instructions provided with each medication in your combination therapy. Do not change your doses or medication schedule without your doctor's advice.

If you have ever had hepatitis B, sofosbuvir and velpatasvir can cause this condition to come back or get worse. You will need frequent blood tests to check your liver function.

What should I discuss with my healthcare provider before taking sofosbuvir and velpatasvir?

You should not use this medicine if you are allergic to sofosbuvir or velpatasvir.

To make sure this medicine is safe for you, tell your doctor if you have:

- a history of hepatitis B;
- kidney disease (or if you are on dialysis):
