Summary: Experienced machine operator and production associate with inspection and assembly skills in manufacturing environments seeking position with a local company.

Skills:

- Skilled in operating and maintaining production equipment, including mills, lathes, and punch presses.
- Able to analyze manufacturing and tooling problems and formulate solutions.
- Experienced in operation of 3 axis machining centers.
- Knowledgeable with common inspection measuring equipment
- Able to read and interpret blueprints including geometric dimensioning and tolerancing

Experience:

CNC MACHINE OPERATOR and PRODUCTION ASSEMBLY

Cox Manufacturing May 2014- December 2015

Performed various cuts on ceramic boards.

Loaded a ceramic board onto the vice and visually inspected finished cuts.

Checked circuit boards making sure all cuts were to tolerance and clean.

Worked with microscope and checked all parts to tolerance according to blueprint specification.

Assembled circuit boards with small additional metal or plastic parts.

CNC MACHINE OPERATOR

Trelleborg Seals August 2011- December 2013

Interpreted work orders, . Start machines, monitor operations and record operational data.

Load stock piece aligning and securing onto vice.

Check machined part to dimension specified on the drawing with my micrometers/calipers.

Gaged parts for defects sorted defective pieces according to types of flaws & discretion of QC.

Troubleshoot machine, tools and fixture problems.

Operated with Fanuc/Fadel controls on either lathe or mill

Read and understood basic G/M codes.

Monitor tool wear, change tools and inserts as required.

Adjust basic offsets to maintain part integrity.

Maintain proper oil/coolant levels

CNC LATHE CNC MACHINE OPERATOR

Omni Machining May 2006- November 2008

Loaded stock onto vise operating Harding cnc Lathe

Monitor tool wear, change tools and inserts as required.

Gaged finished part using calipers, mic's or, comparator for tolerance according to blueprint specs

CNC SWISS SCREW MACHINE OPERATOR

Colorado Precision Machining May 2006- March 2008

Threaded parts that were usually less than 3in' dia and less than 12in' long.

Machining threads, bar work only, loading a length of bar stock

Verifying that it passed through the spindle and was gripped by the collet chuck .

When the part was done checked that it was parted off from the bar, verified the chuck un-clamped, watched the bar was fed forward, and the chuck then closed again, ready for the next cycle.

ASSEMBLY LINE and CNC MACHINE OPERATOR

Wilkerson Pneamatics January 1998- 2003

Assembly Line associate using numerous air tools to assemble products

CNC Machine Operator Lathe, mill and A55 Lablonde Makino Machining Center

Deburring stock before loading on vise gaging parts to tolerance to blueprint spec

Education:

High school Graduate 2000

Red Rocks CC Precision Machining Introductory course 2006
