Novelon®

Novelon is an oral contraceptive, prescribed for prevention of pregnancy in women who elect to use this product as a method of contraception. This medication is a hormonal combined agent as it consists of two active ingredients: 30mcg of ethinylestradiol and 150mcg of desogestrel. This pair forms a novel pill for protection against undesired pregnancy. Furthermore, its wide spectrum of application makes it indispensable in the armamentarium of medications used in treating disorders such as dysfunctional uterine bleeding, Polycystic Ovaries, Pre Menstrual Disorder, acne and hirsutism to mention a few.

Active ingredient: Ethinylestradiol + Desogestrel

Brand(s):Novelon

Novelon® tablet

What is this medicine?

Novelon® is a low dose combined oral contraceptive pill and is used as an effective means of birth control to prevent unwanted pregnancy. Novelon® contraceptive pills contain a combination of two hormones at low doses in a single pill. Each pack of Novelon® contains one month's supply of pills of which there are 21 hormone-containing pills and 7 placebo (non-hormonal) pills, to allow each monthly cycle to end with a withdrawal bleed. When using Novelon® for contraception, you will probably find that your periods become more regular and you may also experience lighter, less painful menstruation and an improvement in pre-menstrual symptoms, like bloating, swelling or weight gain related to fluid retention; also an improvement in acne and reductions in greasiness of the skin and hair.

How does Novelon® work?

Novelon® contraceptive pills contain a combination of two hormones, ethinylestradiol, a synthetic oestrogen, and desogestrel, a synthetic progestogen, which work together to protect against unwanted pregnancy. Preparation for pregnancy depends on a complex interaction between the female sex hormones produced by the ovaries; oestrogen, which stimulates ovulation, and progesterone which prepares the endometrium (lining of the uterus) for implantation of an embryo; as well as other regulating hormones, produced by the hypothalamus in the brain and the pituitary gland. Novelon® combined hormonal contraception works by disrupting the normal menstrual cycle, preventing egg maturation and suppressing ovulation, as well as preventing development of the endometrium, so that a fertilised egg would not be able to implant and grow. Another contraceptive action of Novelon® pill is that the
