Contractubex® Cream

Contractubex® is a highly effective treatment for all scar types. It actively promotes the healing process of the skin and reduces scarring from within.

The scar gel with the triple effect:

- Prevents the formation of excessive scar tissue
- Reduces redness, itching and the feeling of tension
- Makes the scar smoother and improves elasticity

For best possible results, start treatment as soon as the wound is closed or the stitches are removed. This ensures that your scar will become so fine that you will hardly see or feel it.

Contractubex® can be used after:

- abrasions, cuts or lacerations
- operations
- burns or scalds
- laser treatments (e.g. tattoo removal)

Active ingredients

Contractubex® – effective thanks to a unique combination of active ingredients

You can start the treatment with Contractubex® as soon as the wound is closed or the stitches have been removed. The transparent gel contains active ingredients that support the healing process inside the skin, regulating the production of scar tissue and working to positively influence scar formation.

Contractubex® contains three complementary active ingredients:

1. Extractum cepae

has anti-inflammatory and bactericidal properties and prevents the formation of excessive scar tissue.
