OBJECTIVE

Seeking an entry-level position to continue my career in a high-level professional environment. As well as being able to fully utilize my training and skills contributing to the success of the company.

SKILLS

I am a very outgoing individual that has no problem with adaptability. I have great communication and team working skills. As well as problem solving, organization, and time management skills. I have no problem with being a leader, I actually fill that's the only way I can be naturally, I like to set a standard.

EXPERIENCE

FRONTIER AIRLINES

Dec 2022- Current

I got offered a job for frontier early September after undergoing a very competitive interview process. It wasn't till mid-December I then had to attend a 2-month training process to become a flight attendant. After passing several exams and having done flight time I became a certified flight attendant in February of 2023. As a flight attendant I am responsible for ensuring the safety, security, and comfort of airline passengers. I provide customer service while creating a welcoming environment for passengers before, during, and at the conclusion of each flight. I am responsible for demonstrating the location and proper use of safety equipment to all passengers, As well as maintaining communication with pilot and first officer and following their instructions. As a flight attendant you are also required to know several different aircrafts as the safety equipment and location is different on certain aircrafts.

CONAGRA BRANDS

May 2022- Oct 2022

Conagra is a gluten free bread company. I started at Conagra as a line lead, my responsibilities as a lead where to oversee manufacturing activities within my department. I would manage production assembly lines, assist multiple teams and other line leads to complete orders, and prepare reports, as well as regulate any quality issues, and supervise and operate mechanical and manual line machines.

VESTAS WIND AMERICA

January 2017- March 2022

I started at vestas as a production support worker, quickly moved my way up into a production roll on the build team in the shells department. eventually getting promoted as a trainer for multiple processes in shells department. After being a trainer for about 2 years I got promoted into a lead position for build team. Job requirements where to be able to manage and delegate a team of twelve, prompting safety and best practices. As well as reaching production and quality needs. After a year of being a factory lead, I got offered a job to travel as a wind technician and was a lead out in the field for a year. Job requirements where about the same only leading a team of about four or five, knowing how to fill out paper work such as JSA, confined space, LOTO, and SIF (quality) Being out in the field I was able to gain knowledge on the mechanical and electrical side of wind turbines. Majority of the job was to maintain the wind turbines blades and be able to make upgrades and or repairs in/ on the blades.
